

EXCLUSIVE DESIGN

OUR WORK PROCESS

When we specifically design a gaming machine to fit any business and brand, we focus primarily on studying and understanding the best way to meet the company's needs.

Throughout all FBM®'s Exclusive Design Processes, every design and idea is closely shared and discussed with our clients, making it possible to adapt our gaming machines to their target audiences.

Changes and suggestions are always welcomed during this whole process, ensuring a high-quality product result down the line. We provide our experienced team of experts with the know-how to guarantee the final products meet and exceed our client's expectations.

EXCLUSIVE DESIGN

OUR PROJECTS

Firstly, the creation of an exclusive gaming machine requires a good and different idea that meets the needs and desires of potential customers.

FBM® has a highly recognized and skilled team of experts who are committed to delivering the best results. According to the customer requirements and always aligned with the ergonomics concepts, the FBM® Project Team applies their knowledge, skills, tools, and techniques to develop the Exclusive Design Project.

From start to finish, the process of the project coordination and execution may be further divided into 4 basic steps:

- **Product Concept:** the initiation phase is the beginning of any project. An idea for the concept project will be carefully examined to capture all business needs. During this phase, an expert team will identify the strengths and weaknesses of this project and suggest different market trend approaches related to your product. The list of requirements established in the Product Concept Phase will be used to make the design choices. In this step, one or more designs are developed, with which the project result can be achieved. Depending on the project's subjects, the products designed in this phase can include sketches, screen designs, and photos.
- **Product Review:** This step is extremely important. During this stage, everything is arranged to bring the project to successful completion and FBM® will present the project and concepts for approval.
- **Prototype Manufacture:** with all of the planning and designing completed and approved by the client, the project team can now start to build the components of the project output and closely monitor the prototype manufacturing. Our staff will be at your disposal for improvements and enhancements.
- **Prototype Review:** In this step, the client will evaluate the prototype to check the design, ergonomics and mechanical functions. Once the prototype has been evaluated and approved, it will be ready for mass production. FBM® has a proactive posture and keeps by your side throughout all project stages.

EXCLUSIVE DESIGN

EXCLUSIVE DESIGN PRODUCTION QUALITY

Our assembly lines have a high monthly production capacity. We have a highly skilled assembly team who knows how to work with a wide variety of products and is able to respond quickly to the needs of your business. FBM® is very strict with the quality of its products.

EACH TERMINAL, SOFTWARE, AND EQUIPMENT ARE THOROUGHLY DESIGNED AND MANUFACTURED TO MEET THE HIGHEST EXPECTATIONS IN THE GAMING MARKET.

Our factory is certified by ISO 9001; 2015, the norm used to certify the quality management system that demonstrates the ability to consistently provide products and continual system improvement, that meets customer and applicable statutory and regulatory requirements.

Our team is familiar with the most important and respected worldwide certifications, like CE and UL. In this sense, we can help you with information about the procedure and how to obtain it yourself. Furthermore, according to each client's needs, FBM® can be actively involved, obtaining approvals and sending the final product to the client, which is already certified.
